

## SAFETY FIRST. SAFETY SECOND. SAFETY THIRD.

Starting now, managing the safety of your fleet has never been easier.

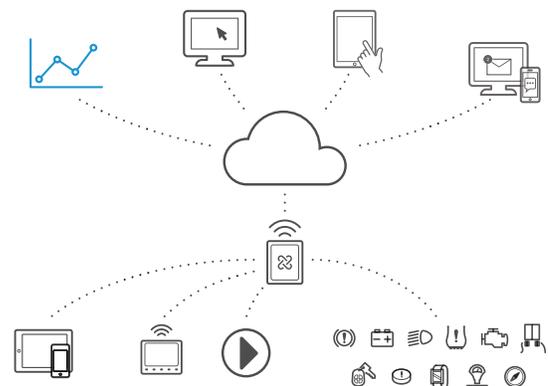

It's a fact that as few as 10% of your drivers can represent up to 65% of fleet risk out on the road. PeopleNet's new Safety Analytics dashboard helps you identify which of your drivers to focus on, and what specifically to help them improve on.

Safety Analytics aggregates driver data from your entire fleet in one place. More importantly, it breaks that data down into easy-to-understand and usable information – allowing you to highlight driving patterns in need of coaching. Studies have shown that analyzing behavior in this way can lower collisions up to 30%.

Tomorrow's a safer place to drive. And now, tomorrow's here.

## The ConnectedFleet™ Platform & the Internet of Transportation Things™

The Safety Analytics dashboard, through the ConnectedFleet Platform, acts as the window into your fleet's entire driving behavior – allowing you to stay ahead of the safety curve and help prevent an incident before it even occurs.

## ANALYZE THE MOST IMPORTANT THING: SAFETY.

DATA ELEMENTS ARE CAPTURED ACROSS 4 KEY AREAS:

All data is aggregated on an easy to read, personalized scorecard that can be printed and signed by the driver.

### CSA

Measures specific CSA violations in partnership with Vigillo, including: Unsafe driving, accidents, HOS, vehicle inspections, alcohol related incidents, and more.

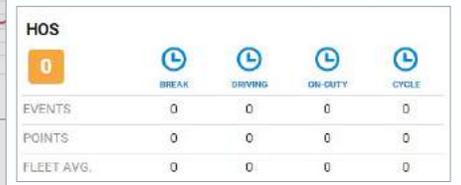

### SPEEDING

Measures specific speeding data based on engine speed and GPS location, and is broken down into the following categories: Speeding 6-10 mph, 11-14 mph and 15 mph over the speed limit.

### HOS

Captures HOS data, including the following violations: Breaks, driving, on-duty and cycle.

### DRIVER BEHAVIOR

Captures specific On-board Event Recording (OER) events, including: Sudden starts, sudden stops, Manual and Panic recordings and Advanced Driver Assistance System events (such as collision mitigation, stability control, rollover protection and headway monitoring).

\*Data is collected through Vusion from the various systems. Each data point has a calculation set by Vusion.
